

# The Chinese Automotive Industry: Engines of Growth and Brakes to Development

This thesis investigates the main drives behind the growth of the Chinese automotive industry and the factors that slows this process down. The development of the automotive industry has been defined by the Chinese central government as one of the pillars for the progress of the Chinese economy, because of its importance in reaching the goal of connecting the rich industrial east with the poor, agricultural oriented, west region by means of transportation and opportunities. The thesis starts by describing the issue from a macro point of view. It then goes to the very micro level of the discussion.
