

Command and Control

The Air Force mission is global. Airmen are trained to employ air, space, and cyberspace forces anywhere, at any time, across the full range of military operations. In order to adequately support the Secretary of Defense and the geographic combatant commanders in executing operations, we must have a global command and control system. Military operations in the 21st century are highly complex and require close coordination to be effective. An effective command and control system allows efficient and effective coordination of all the means that Airmen can bring to bear on a conflict and speed the outcome in our favor.
