

Hiccups

Poetry. Travel Writing. Taking cues from a myriad of short forms haiku, epigram, bon mot, aphorism, senryu the poems in Joe Pan's HICCUPS search out unexpected ways to document events in transition. Here the imminent moment, deeply regarded, is agitated into performance or merely left to drift, generating through language a curious experience of its own making. The disparate settings of these poems are as diverse as the impulses that gave rise to the work: a Tokyo skyscraper, a South African wildlife preserve, a log cabin in the Pacific Northwest, a shark-infested reef off Belize. These are poems that arrive with a jolt, engulfing the familiar, before being left to linger or dissolve. Pan's latest presents new rewards with each reading. Publishers Weekly
