

How Africa Shaped the Christian Mind: Rediscovering the African Seedbed of Western Christianity (Early African Christianity Set)

Africa has played a decisive role in the formation of Christian culture from its infancy. Some of the most decisive intellectual achievements of Christianity were explored and understood in Africa before they were in Europe. If this is so, why is Christianity so often perceived in Africa as a Western colonial import? How can Christians in Northern and sub-Saharan Africa, indeed, how can Christians throughout the world, rediscover and learn from this ancient heritage? Theologian Thomas C. Oden offers a portrait that challenges prevailing notions of the intellectual development of Christianity from its early roots to its modern expressions. The pattern, he suggests, is not from north to south from Europe to Africa, but the other way around. He then makes an impassioned plea to uncover the hard data and study in depth the vital role that early African Christians played in developing the modern university, maturing Christian exegesis of Scripture, shaping early Christian dogma, modeling conciliar patterns of ecumenical decision-making, stimulating early monasticism, developing Neoplatonism, and refining rhetorical and dialectical skills. He calls for a wide-ranging research project to fill out the picture he sketches. It will require, he says, a generation of disciplined investigation, combining intensive language study with a risk-taking commitment to uncover the truth in potentially unreceptive environments. Oden envisions a dedicated consortium of scholars linked by computer technology and a common commitment that will seek to shape not only the scholars' understanding but the ordinary African Christians' self-perception.
