

A Driverless Singapore

A Driverless Singapore

Brian Patrick Gilbert

Driverless vehicles are logically viable in many locations now. So where are they? The only proposals being considered are for driverless vehicles mixing with human-driven vehicles and that is not safe enough. So the answer is to forget mixing both and go for Driverless zones and driverless countries. So a case must be made and preferably a cast-iron case. Even then you must not be surprised if the costs are up to double those forecast. So you need a good safety margin. Good scientists give the facts, the logic and their sources and a spreadsheet with supporting documents is the best way I know. It also needs acceptance by a good government because their support is vital. Why did I choose Singapore? They fit the bill thanks to Lee Kuan Yew who took Singapore from Third World to First in one generation. Chapters:- 1. Introduction. 2. Case. 3. Factors. 4. References. 5. Rebuttals. 6. Spreadsheet - Showing results in Column B. 7. Spreadsheet - Showing formulae in Column B.
