

The Custer Conspiracy

Victorious at the battle of the Little Big Horn in June 1876, Native Americans find a journal kept by someone close to General George Armstrong Custer. They keep it hidden for more than a century. When it surfaces, the action begins. Sally Wolf, an adoring student and a descendant of the man who found the journal, brings it to Professor Walter Reeves of Marlington University in Ohio. He has been in a funk, his marriage in trouble (his wife calls him Moo, My Oblivious One), his promotion blocked by a tyrannical department chairman, and life boring. He has lost interest in his work. He falls asleep at parties. That all changes now, partly because he lusts for Sally, mainly because the journal reveals startling facts about Custer. If the writer is to be believed, Custer conspired with mining magnates and renegade Indians to launch a gambling casino in the Black Hills, a place that indjuns could help run where white men cud play at cards and weary travelers could enjoy a show with indjuns and others pretendin to fight. And he intended to procure the Democratic nomination for the presidency with a payment in gold. Walter realizes that if the journal is authentic and can be published, then his promotion will be assured. Before that can happen, Sally is kidnapped and Walter is pursued by Native American activists and a comic pro-Custer militia organization. For quite different reasons, neither group wants the journal published. This inventive, humorous and unpredictable romp culminates near the Little Big Horn National Battleground, on the anniversary of Custers Last Stand, as Walter, Indians, and the militia collide.
