

The Mythology of Modern Law (Sociology of Law and Crime)

The Mythology of Modern Law is a radical reappraisal of the role of myth in modern society. Fitzpatrick uses the example of law, an integral category of modern social thought, to challenge the claims of modernity which deny the relevance of myth to the practice of law in modern society. Peter Fitzpatrick argues that law is mythic both in its origin and as a continuing social force, and depends for its identity on other mythic categories, such as the nation, the individual and the sciences of man and society. He traces the development of the hold of mythology on Western society to the Enlightenment, despite the supposedly secular rationality of that period, and shows how it was strengthened by the experience of imperialism, when European identity was created in opposition to racially defined others. Challenging and controversial, The Mythology of Modern Law questions current conceptions of legal and social theory. It revises the very foundations of jurisprudence and the sociology of law and undermines the exclusive stands taken within these disciplines.
