

Notes of a Seaplane Instructor: An Instructional Guide to Seaplane Flying (ASA Training Manuals)

Notes of a Seaplane Instructor is a distillation of all the tips, techniques and procedures of a veteran flyer and teacher, in an accessible and informative format. Author Burke Mees has an affinity for the feel of the floats on the water and how to communicate it in writing, as well as a sensible, professional approach which lends a truly one-on-one aspect to reading his book. All the seaplane maneuvers are covered, starting with preflight, proceeding through taxiing, takeoff, landing, and postflight procedures; also operating in various water conditions, stability of the aircraft on the water, step-taxi and -turn, and much more. Many illustrations, taken from and inspired by the authors own original flight instruction notebook sketches, help to further explain the concepts. In this new second edition, Burke provides even more notes on technique and performance particular to the world of floatplanes, with a special emphasis on safety and the best kind of pilot decision-making processes that keep seaplanes flying. The Second Edition also features an added chapter on multi-engine seaplane flying, and an appendix with notes on pumping the floats and ropes and splicing. What is it like to fly single-engine float planes? How do pilots develop and then hone their water-flying skills? What techniques apply to both landplanes and seaplanes, and which ones belong in only one realm? The answers to these questions comprise a unique approach to seaplane flying, in a book that reveals what floatplane mastery is really all about. Notes of a Seaplane Instructor offers insights to all pilots, from already-rated seaplane pilots to those looking to experience the benefits and pleasures of seaplane flying for the first time.
